

Upper Primary - Years 3-5 Science

(Mrs O'Malley)

This term in Science, students in Year 3-5 have been studying Biological Science. In particular, students have been growing their own seeds in the classroom. Here are some pictures of our wheatgrass we have successfully grown.

We will continue to learn about seed growth and development throughout the term. We will also be learning about cross-sections and will be drawing cross-sections of flowers found around the school grounds.

Finally, we will be making Mrs O'Malley's classroom come alive by planting some indoor plants at the end of the term.

Wheatgrass is a food prepared from the freshly sprouted first leaves of the common wheat plant.

Wheatgrass is available in juice bars and some consumers grow and juice wheatgrass in their homes.

Wheatgrass is available as fresh produce, tablets, frozen juice and powder. It is also available commercially as a spray, cream, gel, massage lotion, and a liquid herbal supplement.
